## **GRANITE CARE**

**Crafted by nature, granite is made to last. Its density and durability make it scratch, water and heat resistant (up to approximately 600°C).**

### **DO:**

- **Rinse and dry your granite counter top with a soft cloth to avoid films or streaks from cleaners.**
- **A sealer should be applied every 6-12 months to make granite more stain resistant.**
- **Blot up spills immediately (ex. wine, tomato sauce) to avoid staining.**
- **While we cannot guarantee stains can be removed, in the event that a stain occurs, please call the office to inquire about products and methods available to reduce or remove stains.**

### **DO NOT:**

- **Use aggressive cleaners (ex. bleach, Windex, bathroom cleaner)**
- **Use a scratchy sponge or cloth. Use a soft cloth or sponge to clean your granite.**
- **Overstress your granite countertops by putting too much weight on it (ex. sitting on it). Excess weight in one spot may cause a crack.**
- **Leave acids on the granite surface. This can cause staining and/or etch marks**

**With proper granite care, your countertops will continue to look beautiful for a lifetime.**
